Sports Market Operations · Settlement, Market Integrity, and Time-Sensitive Data

Summary

Operations professional with five years in live, time-sensitive environments: working support queues, keeping systems and access controls accurate for 500+ users, resolving discrepancies, and writing clear documentation for edge cases. Experienced trader on Kalshi and US sportsbooks with a working understanding of how sportsbooks operate, common market types, and settlement procedures. I publish a sports market operations casebook at markets.zaben.co that works through settlement edge cases and the market clarifications they require. Relocating to New York.

Markets and Trading

- Experience trading on Kalshi and US sportsbooks across spreads, totals, player props, and combos.
- Understanding of how sportsbooks operate and how an exchange differs: order books and fair-price settlement on Kalshi versus void-and-refund rules at sportsbooks.
- Settlement procedures and edge cases researched from primary sources: retirements, walkovers, unfinished sets, stat corrections, and "unconditionally determined" standards.
- Interpreting official league data and rulebooks against sportsbook house rules and exchange contract terms.
- Pricing fundamentals: implied probability, removing the vig, expected value, and closing line value.

Projects

Sports Market Operations Casebook · markets.zaben.co

- Public casebook of sports settlement edge cases. Each entry sets out the scenario, the governing rules, how each venue settled, and the market clarification I would publish.

- Retirement case study (ATP, third set): compared Kalshi contract terms, DraftKings and FanDuel house rules, and the 2026 ATP Official Rulebook to propose airtight settlement criteria for unfinished sets and game totals.
- Identified data discrepancies across result sources: one score feed labeled the retirement a walkover, and the official ATP summary contradicted its own line score.
- Flagged an ambiguity in a Kalshi tennis contract, where two clauses point to different outcomes for an unfinished set.
- Live-call log: settlement calls committed to Git during the event, then compared with the actual outcome.

AI Helpdesk Assistant · github.com/Zabenco/ai-helpdesk

- Built a Python retrieval-augmented helpdesk assistant using a local LLM, structured knowledge bases, and a REST API for ticketing integration; used it to improve private, self-service support workflows.

Experience

Support Analyst · Saint Louis University, St. Louis, MO · July 2025 – August 2026

- Administered a Microsoft 365 tenant of 500+ faculty and staff accounts, keeping provisioning, licensing, and access controls accurate.
- Resolved time-sensitive support requests while multitasking a live queue across Microsoft 365, Teams, Exchange, and SharePoint, with a high first-contact resolution rate.
- Wrote clear runbooks and documentation for recurring, complex, and edge-case issues so they were handled the same way every time.
- Partnered with the IT security team on compliance, data governance, and access audits to protect system integrity.
- Trained faculty and staff on Microsoft Copilot and Microsoft 365 tools.

Support Engineer · Essential Network Technologies, St. Peters, MO · September 2024 – June 2025

- Administered Microsoft 365 for multiple client organizations, managing user access, licensing, and configuration.
- Built PowerShell automation for onboarding and license management across client tenants, cutting manual effort by 30%.

- Worked with vendors on integration requirements, API capabilities, and technical specifications.
- Wrote client-facing runbooks and trained clients on new feature rollouts.

Field Technician · Spectrum, St. Peters, MO · June 2023 – August 2024

- Diagnosed and resolved Layer 1–3 network and connectivity problems on-site in a fast-paced field role.
- Held a 4.8/5 customer satisfaction rating.

Founder and Technician · Ethan's Computer Repair, Wentzville, MO · 2021 – 2024

- Ran a part-time IT support and repair business for small businesses, handling on-site and remote troubleshooting.

Skills

- **Market operations:** settlement rules and edge cases, sportsbook market types, exchange contract terms, league rulebooks and official results
- **Data:** Python, REST APIs, structured and time-sensitive data, Git and GitHub, PowerShell automation
- **Communication:** market clarifications, runbooks, knowledge bases, training
- **Operations:** live queue triage, multitasking under time pressure, coordination with security teams and vendors

Education

- **B.S. Information Technology**, Western Governors University · expected December 2026
